### Accessory Requirements

- Charging environment temperature higher than 40°C or lower than 5°C may lead to battery performance degradation, expansion, leakage, overheating and other damages.
- Do not store the battery in an environment that exceeds 60°C. The ideal ambient temperature for storage is 22°C to 28°C.

### Operating Environment

- This device contains strong magnetism. To avoid magnetization effects, keep it away from magnetic cards, IC cards, implantable medical devices (e.g., pacemakers), hard disks, RAM chips, and other devices that are susceptible to interference.
- Use the battery in an environment where the temperature is between -20 °C and 45 °C. Higher temperatures may cause abnormalities in the battery. Excessive temperatures may cause abnormal expansion, fire, or even explosion of the battery. It is recommended to fully charge the battery at room temperature before using it in a low-temperature environment to extend the battery life.
- Do not place the device near flammable or combustible materials (e.g. carpets and wood products) for charging. Keep an eye on the charging process to prevent accident.

- Do not expose the battery to high temperatures or around heat generating devices such as sunlight, heaters, microwaves, ovens or water heaters. Overheating of the battery may cause an explosion.
- Do not disassemble or modify the battery, insert foreign objects, or immerse it in water or other liquids, as this may cause the battery to leak, overheat, catch fire, or explode.
- The electrolyte inside the battery is highly corrosive. If it accidentally comes into contact with your skin or eyes, rinse immediately with water for at least 15 minutes and seek immediate medical attention.
- Do not throw the battery into a fire as this may cause the battery to catch fire and explode.
- Do not drop, crush or puncture the battery. Avoid subjecting the battery to large external pressures, which could result in internal short-circuiting and overheating.
- Do not use a battery that has been damaged.
- Do not store the battery for a long period of time after it has been completely discharged to avoid over-discharging the battery and causing damage to the battery cells, which will make it impossible to resume use.
- Be sure to discharge the battery completely before placing it in the designated battery recycling bin. Batteries are hazardous chemicals and should not be disposed of in the trash. For details, please follow the local laws and regulations on battery recycling and disposal. If the battery cannot be completely discharged, please do not dispose of the battery directly in the battery recycling bin, but contact a professional battery recycling company for further processing.
